RADHA BOOTIC CENTRE

Women’s & Girls’ Fashion | Category-wise Image Catalogue + Website Master Prompt

This document organizes the images supplied in your original Word file. The boutique focuses on ladies’ and girls’ clothing, including blouses, lehengas, sarees, suits and traditional/festive wear. Existing images are kept as references; image rights should be checked before publishing them commercially.

1. Brand identity & website design references

Original Radha Bootic Centre logo

Website / homepage design reference supplied in the document

2. Designer blouses & blouse styling

Pink embroidered blouse — front/back design reference

Bright pink designer blouse — front view

Price-list screenshot showing traditional bottom-wear categories

Green Patiala / salwar bottom — product reference

7. Additional fashion inspiration / social-media references

Blouse and outfit styling video screenshot — inspiration reference

8. Website development master prompt (copy and paste)

Build a complete, polished, mobile-first e-commerce website for “Radha Bootic Centre”, a boutique that specializes ONLY in women’s and girls’ clothing. Do not make it a men’s clothing store. Use the supplied logo and the category-wise reference images in this document as visual inspiration. Do not claim that reference images are owned by the boutique; use only images we have rights to publish, and use original/generated licensed fashion photos for production if needed.

BUSINESS & BRAND
- Brand: Radha Bootic Centre
- Main audience: women, girls, mothers shopping for girls’ occasion wear, wedding and festive shoppers.
- Visual direction: premium Indian boutique, elegant and warm, clean layout, rich but restrained colors inspired by the supplied logo; readable typography, spacious product cards, clear prices and calls to action.
- Preserve the supplied logo’s spelling and visual identity. Do not invent a physical address, phone number, social account, prices, stock, testimonials, certifications or policies. Use editable placeholders where details have not been provided.

PRODUCT CATEGORIES
1. Designer Blouses (neck designs, sleeve designs, embroidered, mirror work, custom stitching)
2. Sarees & Blouse Pairings
3. Ladies’ Lehengas & Bridal / Wedding Wear
4. Ladies’ Suits (salwar suits, Patiala suits, Anarkali, festive suits)
5. Girls’ Lehengas & Ethnic Wear
6. Girls’ Party Dresses / Gowns
7. Traditional Bottom Wear (salwar, Patiala and other available styles)
8. Custom Stitching / Boutique Services

Only show a category if the business actually sells that category. Build editable category and product data so the owner can add, edit, hide or reorder items.

PAGES
- Home page with a premium hero banner, women’s and girls’ category tiles, new arrivals, featured products, boutique introduction and contact/WhatsApp CTA.
- Shop / category listing with filters for category, size, colour, occasion and price (only where product data exists).
- Product detail page with image gallery, front/back/detail photos, price, available sizes/colours, measurements, stitching/customization notes, stock status and add-to-cart.
- Cart and checkout with clear order summary, delivery details, validation, and a configurable payment integration. Never store card details directly.
- About the boutique, contact page, FAQ, shipping/delivery, returns/exchanges, privacy policy and terms pages. Use editable policy templates and flag them for owner review before launch.
- Optional appointment/custom stitching inquiry form.
- Admin dashboard with secure login to manage products, categories, images, prices, stock, orders, enquiries, banners and site content.

IMAGES & PRODUCT PRESENTATION
- Use the provided images as references for category arrangement and style direction.
- Use clear, high-resolution, licensed or original images of Indian women’s and girls’ ethnic fashion. Product photos should have consistent lighting, clean backgrounds, accurate colours, and useful front/back/close-up views.
- Never use unrelated men’s clothing, unrelated stock photos, watermarked images, or images that misrepresent the actual product.
- Add descriptive alt text and optimized responsive image sizes. Keep image credits/licence information where required.

FUNCTIONAL REQUIREMENTS

- Responsive on mobile, tablet and desktop.
- Search, category navigation, product filters, cart, checkout/order enquiry, order confirmation, contact form and WhatsApp link (configured from the real business number).
- Admin CRUD for products and categories; image upload validation; inventory and order status management.
- Form validation, clear loading/error/success states, accessible keyboard navigation, semantic headings, sufficient contrast and useful empty states.
- SEO-friendly page titles, descriptions, product URLs, sitemap, robots rules and social-sharing metadata.
- Analytics only after consent where legally required; cookie/privacy controls as applicable.
- Add an easy-to-use content management workflow so non-technical staff can update products.

SECURITY & RELIABILITY
- Use a maintained framework and supported dependencies; separate frontend, backend and database responsibly.
- Validate and sanitize all inputs on the server; use parameterized database queries; enforce authorization on every admin/API action; use secure password hashing, rate limiting, CSRF protection where applicable, secure cookies, HTTPS, secrets in environment variables, and safe file-upload checks.
- Do not expose API keys, database credentials, private customer data or admin routes in client code.
- Apply least-privilege database access, logging without sensitive data, backups, dependency/security updates and a documented restore process.
- Follow applicable privacy and consumer-protection requirements; collect only necessary customer data and provide a way to contact the business about data requests.

PERFORMANCE & TESTING
- Optimize images, lazy-load below-the-fold media, cache suitable assets, paginate product lists and avoid unnecessary scripts.
- Design for 100 concurrent users as a target, but do not simply claim it can handle that load. Run and document a load test with realistic browsing, search, cart and enquiry flows; measure response time, error rate, CPU, memory and database load; fix bottlenecks and report tested results and limitations.
- Add automated tests for key shopping flows, admin permissions, validation and errors; test mobile layouts, accessibility basics and major browsers.
- Provide deployment instructions, environment-variable example without real secrets, database schema/migrations, seed sample products clearly marked as demo data, backup/restore instructions and a handover guide.

DELIVERABLES
1. Working source code and project structure.
2. Database schema and migrations.
3. Setup and deployment instructions.
4. Admin user setup instructions without hardcoded credentials.
5. Test results and load-test report.
6. List of all placeholders the owner must fill in (real business contact details, products, prices, stock, delivery/payment settings, policies and social links).
7. Do not invent real product facts. Mark sample products, sample prices and testimonials as demo content and ensure they can be replaced or removed before launch.

Before final delivery, check that the site is clearly for women’s and girls’ fashion, that every navigation item works, that forms are validated, and that no placeholder data is presented as verified business information.

9. Owner checklist before publishing

- Confirm the real phone / WhatsApp number, address, hours and social links.
- Add accurate product names, prices, sizes, colours, stock and custom-stitching details.

- Use only images the boutique owns or is licensed to publish.
- Confirm delivery, exchange, refund and privacy policies.
- Connect and test payment provider securely if online payments are required.
- Test mobile checkout, admin login, product editing, backups and 100-user load test.
